Manheimer's Cataloging And Classification, Fourth Edition, Revised And Expanded (Books In Library And Information Science Series)

Synopsis

This work has been revised and updated to include the Anglo-American Cataloguing Rules (2nd ed), the Dewey Decimal System Classification (21st ed) and the Library of Congress Classification Schedules. The text details the essential elements of the International Standard Bibliographic Description; introduces the associated OCLC/MARC specifications; and more. The CD-ROM gives more than 500 PowerPoint slides and graphics identical to the text, in addition to scans of the title page, and title page verso and other illustrations that support examples from Anglo-American Cataloguing Rules (2nd ed).

Book Information

Series: Books in Library and Information Science Series (Book 59)

Hardcover: 416 pages

Publisher: CRC Press; 4 edition (September 9, 1999)

Language: English

ISBN-10: 0824794761

ISBN-13: 978-0824794767

Product Dimensions: 7.2 x 1 x 10 inches

Shipping Weight: 2 pounds

Average Customer Review: 3.4 out of 5 stars 8 customer reviews

Best Sellers Rank: #1,114,467 in Books (See Top 100 in Books) #68 in Books > Politics & Social Sciences > Social Sciences > Library & Information Science > Cataloging #119 in Books > Reference > Writing, Research & Publishing Guides > Publishing & Books > Bibliographies & Indexes > Art & Photography #228 in Books > Reference > Writing, Research & Publishing Guides > Publishing & Books > Bibliographies & Indexes > Science

Customer Reviews

"About the third edition.a valuable source for continuing education for practitioners who want to acquaint themselves with changes in new editions of the basic cataloging tools. . . .a significant improvement. . .considerably expanded. . .The step-by-step analysis of the answers for the DDC and LCC exercises is especially valuable." ---Canadian Journal of Information and Library Science
Unqualified praise for the previous editions. . . "This workbook will be useful in the most basic cataloging and classification classes, and can be used as a self-study tool." ---Library Science . . .
.The examples will prove useful to beginning students. . .the exercises do offer good practice.. .
.There is also an outline for. . .an interesting lecture on subject headings.an extremely

valuable workbook for a one-semester beginning course." ---The Library Quarterly .". .designed for use. . .in a beginning course in cataloging and classification." ---American Libraries

A very confusing explanation to cataloging. I worked closely with a professional cataloger who was also unsure why the book was structured the way it is. A disappointing text (used in a disappointing class). However, I ultimately don't know if there are any cataloging books out there that do a clearer job of teaching the subject.

If you learning how to catalog the best thing is to search online. This resource is useful, but you will learn quickly it is not the only resource you need.

This was a required book for a graduate cataloging course. At first I was very overwhelmed by the book but as time went on, I appreciated having it as a resource. The book is heavy on examples but there is not a lot of text that tells you HOW to catalog. However, the AACR2 book, the information from the professor and various online resources like MARC21 and OCLC web sites filled that gap. The various types of examples illustrated are what makes this book a winner.

This book is informative. It gives many examples on how to catalog records with details. It comes with a Power Point disc that goes along with book and that is very helpful. It also has the Cutter Table and explains it. The books gives details about Library of Congress and Dewey cataloging.

Very useful. This is one of the books I've held onto after graduation, because who knows if I might need a refresher.

I had to use this book for a graduate LIS degree and it was okay. There are lots of examples but few explanations so you have to discern for yourself what the author is trying to convey. If you are not familiar with cataloging this is not helpful since it does not explain very well. I am looking for a book that shows examples and explains the AACR2 rules in English for people who are not familiar with the library terms. This book would have been excellent if there was more detailed explanations.

cataloging is a mind-boggling experience for most people. this book actually helps unravel the mystery of it all! i highly recomend it to anyone trying to decipher the language of cataloging.

this bohannan lady sure knows how to write a library and information science book! reads like a great adventure novel ... the best in the series.
