"I have recommended it to colleagues. It is head-and-shoulders above our current book.""This book is superior to our current text.""Overall it is an excellent text."

Stefan Waner and Steven R. Costenoble both received their Ph.D. from the University of Chicago, having studied several years apart with the same advisor, J. Peter May. Their paths merged when Steven joined Stefan at Hofstra University in 1987; since then they have coauthored 18 research papers as well as a research-level monograph in algebraic topology. By the early 1990s they had become dissatisfied with many of the Finite Mathematics and Applied Calculus textbooks. They wanted textbooks that were more readable and relevant to students' interests, containing examples and exercises that were interesting, and reflected the interactive approaches and techniques they

found worked well with their own students. It therefore seemed natural to extend their research collaboration to a joint textbook writing project that expressed these ideals. To this day, they continue to work together on their textbook projects, their research in algebraic topology, and their teaching.Stefan Waner and Steven R. I'm hoping this book brings me good math juju. It came on time and packaged well.

I had to get the book for school, and it was in good condition.

I'm not quite sure where to mail my rental back in to??

on time and as described
