I bought this product out of desperation since there aren't many options at the moment for the new MCAT, and my test is in a month. I refused to buy Next Step books since their reviews are suspicious as all hell on here. All of their reviews on here are... questionable (oh gee, nothing but 5* reviews from people who have reviewed nothing but next step books. What a coincidence). Take that for what you will. What I like about this book: Seems to accurately follow the outline of what's needed for Psych/Soc topics What I don't like: This book isn't concise or well-written for a review book. It reads more like a textbook. The text is dense dense dense. Nothing is written in an intelligent way to help you learn concepts quickly and efficiently, it's just dumped on you. Lots of filler crap you don't need. The first 2 chapters of this book are just about the MCAT as a whole and have no relation to psychology/sociology. Why? Do they put that in every MCAT book? Redundant and unnecessary, but at least they can claim this book has 8 chapters instead of 6. Also, a paragraph on 'forgetting' in the memory section? Who the bleeping bleep doesn't know what it means to forget something? That could've been one sentence - 'In contrast to memorizing something, we tend to forget information, the decay of a memory until it can't be recalled.'. Boom. I guess that would make this book too short and readable. I'm sure this book will teach me what I need to know, I just wish they would've taken the time to write it in a review book sort of way instead of just heavy, dense wording like it has.

It only has strategies for the MCAT CARS. Mostly which are useless. I was hoping there would be practice in these books, but there really isn't. Also the first two chapters of every Princeton Review book is the exact same. Just tells you some bogus information about the MCAT 2015. If I were you, I'd just buy a different book.

Well first of all, after registering the book online I found that the three practice tests included are 2 unique tests plus the MCAT Demo test that the Princeton Review puts out for free on their website

for anyone to try. Yes it is a full-length but I found it sort of gimmicky that they advertise the book as coming with 3 tests. Be sure to register online because there is content addendum to the last few chapters and a few errors that are corrected for. It's sort of inconvenient that 50 plus PDF pages of information that you need is not included in the book but at least they post it online for you. As someone else said, the first two chapters are basically a general intro to the MCAT which they stick into all of their books, but I have noticed other test prep books that do that as well. EDIT: Bumped up to 4 stars after using the book for a while. The content seems pretty good and thorough, it hits most of the points on the AAMC topic outline, and explains things clearly. Easy to read. There are questions throughout to help gauge understanding, and a few passages at the end of each chapter for practice which are decent. And even with only 2 practice tests, it's still good deal for the price.

Just wanted to point out that there is NO difference from the first edition. I went through the AAMC guide and have been using this book, Kaplan's Psych book, Examcracker's Psych book, a general psychology textbook and a social psychology textbook. I have never taken Psych before. First off, this book has a overly large section dedicated to the nervous system which, if you have TPR's Biology book for the Old MCAT, you will notice that they are exactly the same. The other sections seem fine and I personally believe this has all + more for preparing for this section on the MCAT. It doesn't have as much info as Kaplan but has more than Exam Crackers. I wish it had a glossary like Kaplan's or was more concise like Examcrackers. This book lies somewhere in the middle. If I had to rank the books in terms of thoroughness its Kaplan > TPR > EK. If I had to rank them on overall helpfulness its EK > Kaplan > TPR. The advantage of this book is that it has the most questions and still hits all the content but it is a rather boring textbook-like Prep book. Take my advice with a grain of salt since I have not taken the MCAT yet but I have read/skimmed all the books.

I didn't take a single Psych or Soc. course before I took my MCAT. I studied this book hard and was able to get a decent score on the section. It also came with good online practice tests. As with all prep methods, never rely on one source.

Pretty good, could use more passages but it's clear and the illustrations and tables are nice. My only qualm is that there could be more mnemonics or something to help memorize since there are so many terms.

This book goes into a lot of detail, more than you'll probably need to know. However, I can't blame

the companies because no one really has any idea what to expect with the new MCAT.

Helpful, compare to aamc outline and other books..
