If it's on the test, it's in our books! Get the help you need to ace the APs with the experts at The Princeton Review. [View larger](#)

The experts at The Princeton Review have been helping students, parents, and educators achieve the best results at every stage of the education process since 1981. The Princeton Review has helped millions succeed on standardized tests, and provides expert advice and instruction to help parents, teachers, students, and schools navigate the complexities of school admission. In addition to classroom courses in over 40 states and 20 countries, The Princeton Review also offers online and school-based courses, one-to-one and small-group tutoring as well as online services in both admission counseling and academic homework help.

Good. They should fix their mistakes from year to year.

The book is pretty good. However, it arrived with a ripped cover.

Errors in the book: On page 119, example number 5 refers to additional information from example number 3. However when solving the problem, it lists the length of the track as 500m instead of 400m, changing the average speed to 5.128 m/s. The magnitude of the average velocity should remain the same. On page 132, in the second paragraph, the first equation given is $v(t) = -10 + 30$. Instead it should be $v(t) = -10t + 30$. I will keep this post updated until I finish the book.
