Nester's Microbiology: A Human Perspective

Synopsis

Note: This book is a standalone book. Perfect for the non-major/allied health student (and also appropriate for mixed majors courses), this text provides a rock solid foundation in microbiology. By carefully and clearly explaining the fundamental concepts and offering vivid and appealing instructional art, Microbiology: A Human Perspective draws students back to their book again and again! The text has a concise and readable style, covers the most current concepts, and gives students the knowledge and mastery necessary to understand advances of the future. A body systems approach is used in the coverage of diseases.

Book Information

Hardcover: 896 pages

Publisher: McGraw-Hill Education; 8 edition (January 6, 2015)

Language: English

ISBN-10: 0073522597

ISBN-13: 978-0073522593

Product Dimensions: 9.1 x 1.5 x 11.2 inches

Shipping Weight: 4.3 pounds (View shipping rates and policies)

Average Customer Review: 4.4 out of 5 stars 31 customer reviews

Customer Reviews

Denise Anderson is a Senior Lecturer in the Department of Microbiology at the University of Washington, where she teaches a variety of courses including general microbiology, medical bacteriology laboratory, and medical mycology/parasitology laboratory. Equipped with a diverse educational background, including undergraduate work in nutrition and graduate work in food science and in microbiology, she first discovered a passion for teaching when she taught microbiology laboratory courses as part of her graduate training. Her enthusiastic teaching style, fueled by regular doses of Seattle's famous coffee, receives high reviews by her students. Outside of academic life, Denise relaxes in the Phinney Ridge neighborhood of Seattle, where she lives with her husband, Richard Moore, and dog, Dudley (neither of whom are well trained). When not planning lectures, grading papers, or writing textbook chapters, she can usually be found

chatting with the neighbors, fighting the weeds in her garden, or enjoying a fermented beverage at the local pub. Sarah Salm is a Professor at the Borough of Manhattan Community College (BMCC) of the City University of New York, where she teaches microbiology, anatomy and physiology, and general biology. She earned her undergraduate and doctoral degrees at the University of the Witwatersrand in Johannesburg, South Africa. She later moved to New York, working first as a postdoctoral fellow and then an Assistant Research Professor at NYU Langone Medical Center. Her research has covered a range of subjects, from plant virus identification through prostate stem cell characterization. When not focused on the textbook and her classes, Sarah loves to read, hike, and travel. Deborah Allen is a Professor at Jefferson College in Missouri, where she teaches microbiology as well as several other courses for students entering allied health careers. Her graduate work was in zoology at the University of Oklahoma and in neurobiology and behavior at Cornell University. She participated in cancer research at the University of Arkansas Medical Center before embarking on a career in publishing, working in acquisitions and development for books in the life sciences. She is now thrilled to be working on the other end of the desk with the Nester team. Away from campus, Deborah reads or listens to her favorite Eve Dallas novels, floats the rivers and listens to folk music in the Ozarks, and fully appreciates the local microbes while visiting Missouri wineries.

Lacks chapter 31 despite claiming it is identical to the US version.

;))

How do you give a good review to a difficult text book? The book itself is good, delivery time excellent and the fact I can rent it, even better. The class is tough, but interesting. So ... how do you rate a text book?

great

The book was well written and easy to follow.

Fast shipping and the product was just as described.

I got a used copy for half of what my college was asking. It looks like new! Very satisfied with my

purchase!

I used it for my microbiology class. It's good and it's detailed. Definitely Learned a lot from it.
